

ABSTRACT OF THE DISCLOSURE

A kit is disclosed which includes a blister tray and a package for a small device insertable within the blister tray. The blister tray has at least one medical device contained therein. The package includes a pair of end flaps engageable with the medical device such that the medical device, contained within the blister tray, inhibits the removal of the package from the blister tray. A plurality of openings is provided in the package and cooperates with each other to form a receptacle for a medical device, such as a vessel inverter.
